A state of the art product to manage canteen operations. 
meant to eliminate ghost meals & to keep control on canteen operations.

Many organizations provide canteen facility to its employees, but proper management of meals per employee is a tough task. Our Canteen Master provides a user friendly system that facilitates quick and efficient operations to cover a larger section of employees or students for an organization. The software also provides paperless and cashless transaction solutions and also has network based solutions to operate multiple counters simultaneously.
A biometric hardware (Hand punch or Finger Print System) is installed at the canteen. The authorized staff will be required to key in his/her pin to the clock and place his/her hand or fingerprint on the biometric device. Once authenticated, the data will be sent to a linked PC nearby and a meal ticket will be printed immediately in a split second. The staff will then take the printed receipt and submit it to the chef for his/her meal.

This process will generate various reports of the staff canteen attendance and the number of meals taken per day or at the end of the period. A staff member can be allowed maximum a (definable) number of times. The option of staff having to choose what meal to take will attract an additional hardware; in this case, a touch screen. All meals available will be displayed on the touch screen. A staff member will get to select the meal of (which could be multiple). After scan of his/her hand on the biometric device the selected items/meals will be printed on the meal coupon.

Reports
- Menu printing, coupon printing
- Daily / weekly/ monthly analysis of meal taken (summary and detailed)
- Canteen wise / shift wise meal analysis and reconciliation
- Checking on multiple meals and exception analysis

Features
- Control on Fake Meals declaration in case of Contracted Canteen
- Control on Multiple meals being taken by employees on Company Run Canteen
- Biometric/RFID Verification for employees & visitors
